IC-7410 Release!

The long awaited release of the IC-7410 is here and orders can be placed immediately! Get your order in as initial shipment quantities will go quickly!

Product	Retail Price	Availability
IC-7410 02	\$2,475.00	March 2011

The IC-7410 replaces the late IC-746PRO with upgrades to performance and specifications that provide excellent cost performance. This specialized HF rig employs the same high grade DSP unit and double conversion super-heterodyne system developed from the latest technology used in the IC-7800/IC-7700/ IC-7600 series. In addition, when used with the optional FL-430 and FL-431 filters, narrow mode signals are protected from adjacent inband signals. The 3kHz first IF filter is especially effective in the CW and SSB modes.

SELLING POINTS

- ▶ +30dBm 3rd order intercept point in HF bands
- ▶ Double conversion super-heterodyne system improves inband IMD characteristics
- ▶ 32-bit floating point DSP unit
- ▶ Optional 3kHz and 6kHz first IF filters
- ▶ Large LCD display
- ▶ ±0.5ppm frequency stability
- ▶ Built-in simple band scope
- ▶ Built-in automatic antenna tuner
- ▶ Optional RS-BA1 for IP remote control
- ▶ Built-in voice synthesizer announces operating frequency, mode and S-meter level
- ▶ Ample CW functions
- ▶ Microphone equalizer and adjustable transmit bandwidth
